

I Firmenich Context

Like papyrus from Egypt, *Cyperus scariosus* belongs to the Cyperaceae family.

A delicate flowering herb, *Cyperus scariosus* grows wild in India and in some other regions of Asia.

Cypriol is also called Umbrella sedge or Nutgrass in English, Nagarmotha in Hindi, and Nagaramustaka in Sanskrit.

Cypriol has a long history in India where the oil has been used for centuries to perfume clothes and in aromatherapy.

Thanks to a joint venture with Jasmine Concrete Exports in India in 2014, Firmenich sources a Cypriol essential oil of choice, carefully selected with the long-term experience of local Indian suppliers.

I Technology

The roots (rhizomes) are Steam-Distilled to produce a fragrant oil.

Then Firmenich's Molecular Distillation technology is applied (to the essential oil). This action yields a refined Cypriol Heart.

With a high level of cyperene and copahene, this colorless ingredient is perfectly adapted to traditional compositions like re-inventing the most crystal-clear and modern Chypre.

I Reported Benefits

Cypriol roots are typically used in herbal medicine.

Nagarmotha oil is known in aromatherapy for its relaxing, anti-inflammatory and decongestive effects.

It is also used to treat digestive problems.

Woody - Leathery

Cyperus scariosus

Portfolio

CYPRIOLO HEART
937415

Pure & Natural.

Thanks to its long-lastingness, many facets are unveiled.

From a distinctive woody, dried and earthy profile, it offers leathery, slightly smoky, amber and animalic notes.

This very precise profile will support Patchouli in most masculine perfumes.
